Pam:

I have uploaded the January UPDES data for the Skyline Mine to the EDI. However, I am having trouble uploading the Sum sheet. As far as I can tell, the only value needed for Skyline's sum sheet is the TDS number in tons/day if the TDS is greater than 500 mg/l. I cannot find the TDS MAX parameter listed as one of my choices to select. Possibly I just don't see it or have uploaded the sample data incorrectly.

Since we have reduced our pumping from the mine during the month of January - and for the next several months - our TDS has climbed above 500 mg/l TDS. Our maximum load in tons/day was 6.4 tons on January 13, 2004. The TDS concentration was 943 mg/l at a discharge rate of 1123 gpm. The UPDES tonnage limit, if the TDS concentration is greater than 500 mg/l, is 7.1 tons/day. The other samples taken during the month were less than 703 mg/l at similar or lesser flows. I suspect that we will be above 500 mg/l but less than 7.1 tons/day until pumping rates increase again, possibly in May 2004.
